To whom it may concern

**Re. Y Morfa Leisure centre - Low Carbon Communities application**

Warm Wales is a Community Interest Company, targeting the eradication of Fuel Poverty in Wales, the improvement of Energy Efficiency across Wales' housing stock, and the construction of low and zero carbon buildings

Our work with communities across Wales has demonstrated that targeting single issues is not effective in community solution terms, and that the alignment of sometimes disparate community solutions within programmes is an effective and pragmatic way of delivering much needed improvements in communities

It is with this very much in mind, that we offer our support to the Low Carbon Communities bid for Y Morfa Leisure centre. Taking the opportunity to incorporate a sustainable and well engineered construction, along with a community refuge is not only practical and innovative, but offers real benefits to a community which is not only high in terms of overall deprivation, but which has suffered coastal flooding on a large scale in recent time, and is in need of such a solution

I have personal experience of the devastating effect of the 1990 floods and am wholly supportive of such a project with the strong and tangible community benefits alluded to in the bid, which would utilise DECC funding expeditiously in North Wales, and bring future benefits to this community

We look forward to working closely with the programme team on this project and remain happy to offer further support should this be required, or discuss the programme in more detail at the appropriate time

Yours Sincerely

**Crispin.L.Jones**
